

Connect on-Device

Deploy transactional devices quickly and flexibly

The Connect on-Device hardware-independent machine operating system is the most technologically advanced option for powering applications on transactional devices

Companies need to be able to create and deploy transactional experiences -- including self-checkout, kiosks, transportation ticketing, ATMs, cash recyclers, and more -- on a variety of devices and machines quickly and flexibly. Connect on-Device streamlines this process, while ensuring performance and reliability of applications in the field. Offering a large and diverse set of pre-built applications and the power to build custom applications, suitable for any transaction experience and the ability to run on any device, the Connect on-Device maximizes speed and deployment options.

With Connect on-Device, you trade slow and inflexible application deployment for:

Design Flexibility

- Choose from over 50 pre-built applications covering a wide range of uses
- Configure the user experience -- logos, colors, screen elements-- for brand adherence and consistency
- Design custom applications with a developer toolkit to meet any unique need or requirement

Faster Deployment

- Everything included to rapidly create and deploy applications
- Developers need not understand the underlying software to build custom apps
- Purpose-built, payments- and cash optimized architecture is ready-to-go

More Hardware Options

- Works with PayComplete or third-party devices
- Runs on Windows or Linux operating systems
- Built in Java for portability

Key Features of Connect on-Device:

Built-in apps

Connect on-Device comes with over 50 pre-built applications for a wide variety of customer interactions, such as order-taking kiosks, ATMs, ticketing, check-in/check-out and more.

Configurable themes

Connect on-Device's standard applications come with configurable themes, so users can be presented with custom logos, colors, screen elements and other aspects of the user interface to make the experience brand-consistent.

App developers kit

A software development kit (SDK) is available for using Java or Javascript to build custom applications supporting practically any user experience, including integrating with other back-end systems

Hardware-agnostic development

Connect on-Device can be used with both PayComplete and third-party device hardware, providing maximum flexibility in device choice configuration.

The PayComplete Advantage:			
Enterprise-caliber software for large-scale applications	Hardware-agnostic: works with PayComplete or third-party devices	Maximum flexibility for coding custom applications	An integral part of the PayComplete Connect platform

Part of the PayComplete™ Unified Transaction Platform

VaultConnect is an integral part of the cash management solution suite within the PayComplete™ Connect Platform. Our platform unifies reporting and management across all transactional devices, including offline vaults, POS, self-checkout, and recyclers. The flexibility of the PayComplete™ Connect Platform allows for a single IoT cloud-based enterprise layer, unifying the management of devices, payments, users and data.
