# Connect

Unify transactions management across the enterprise

Connect puts oversight and management on a single pane of glass to unlock the power of unified transactions management

In-person transactions are still a major aspect of business operations for most industries. Connect streamlines and optimizes all aspects of managing these transactions, enabling a new approach to overseeing enterprise-wide operations. Harnessing the power of the cloud within a fully secure and PCI-ready environment, Connect features intuitive user interfaces and the flexibility of robust connections via an open REST API. Connect integrates with all PayComplete hardware and compatible third-party machines.

With Connect, you trade costly and time-consuming transactions management for:

More Visibility, Better Decisions

- Define KPIs for transactions volume, user activity, device health and more
- Create custom reports and assign automated schedules for delivery to users
- Enable user queries, accessing any available data in the system

Faster, More Accurate Reconciliation

- Automate the process of reconciling transactions across systems and providers, and with cash deposits
- Compare actual and expected transactions by integrating with POS, ticketing systems, and more
- Conduct reconciliation by staff member, location or organization wide

Lower Costs and Risk

- Streamline oversight and management of users and systems
- Orchestrate the access to, and activity of users on, all transactional systems
- Block specific users from additional activities until requisite conditions

Key Features of Connect Cloud:

Transactions systems management

Connect makes it possible to remotely configure, update, monitor, troubleshoot and manage all users and machines involved in unattended transactions.

Activity orchestration

Monitor and control the transactions-related user activity and data flows across the enterprise with Connect, setting limits and controls, triggering alerts, and blocking further activity where needed.

Cross-system reconciliation

Connect powers reconciliation of transactions across systems and providers at the level of individual employees, location, or enterprise-wide.

Transactions analytics

Rich visualizations of transactions-related KPIs can be built with the data in Connect, using configurable templates and presented at multiple levels and on a schedule or based on ad hoc queries.

Systems integration

For easy integration with other enterprise systems, Connect Cloud includes a web API, ensuring reliable and accurate data flows across transactional operations.

SaaS infrastructure

Connect can be deployed in a pure SaaS mode, or in a private hosting environment or even on a customer's own premises, maximizing flexibility to meet any requirement.

PayComplete

The PayComplete Advantage:

Enterprise-caliber software for large scale transactions and device management	Hardware-agnostic: works with PayComplete or third-party devices	Service provider-agnostic: works with any bank or CIT	An integral part of PayComplete's platform for unified transactions

Part of the PayComplete™ Unified Transaction Solutions

PayComplete is the global leader enabling the technology of in-person transactions and payment. The PayComplete solution is a fintech IoT platform made up of an adaptable set of SaaS and machine software, intelligent devices, and tech-enabled services.
