

Bring Digital Precision to Cash Transactions

PayComplete enables companies across industries to manage and control physical financial transactions at IoT-enabled kiosks, self-checkout lanes, cash recyclers, smart safes and more with the precision and agility of digital commerce, innovating self-service experiences and operations for both consumers and employees.

PayComplete Connect is a fintech IoT platform made up of an adaptable set of SaaS and machine software, intelligent devices, and professional, technical, and merchant services.

RetailConnect

Integrate all points of cash from your storefront to the back office

Cash Orchestration

Monitor and control the access to, and movement of, cash throughout your retail environment, setting limits and controls, triggering alerts, and blocking further activity where needed.

Cash Systems Management

Remotely configure, update, monitor, troubleshoot, and manage all cash, users, and machines involved in unattended transactions.

Cash Reconciliation

Power reconciliation of net cash position with cash sales, deposits, and disbursements, conducted at the level of individual cashiers, line/manager, or store wide.

Cash Analytics

Build rich visualizations of cash related KPIs using configurable templates and present them at multiple levels per a schedule or ad-hoc queries.

We enable you to streamline cash management in real time across disparate devices and your retail operations by:

Simplifying cash management across your enterprise

Cash payments comprise nearly 40% of retail transactions and cost up to 15% of transaction value to manage. PayComplete provides solutions that streamline and optimize all aspects of cash operations in a PCI-compliant, cloud environment.

Integrating offline vaults into a unified view of cash

Cash sitting in offline repositories is normally safe, but invisible. We connect safes and vaults, and other cash stores with cash-related data, while also enabling you to produce and manage tills for start- and end-of-day operations.

Reduce the cost and complexity of cash transactions

Optimizing labor in a time of critical labor shortages

Keeping stores adequately staffed through the pandemic has been a battle. First, stores were implementing contradictory safety measures, widespread panic purchases leading to overwhelmed stores and now struggling through wage increases amidst nationwide labor shortages.

Leveraging legacy equipment and intelligently invest in new systems

PayComplete

Connect existing devices like self-checkout, smart safes, or deploy new systems like cash recyclers. We put oversight and management on a single pane of glass to unlock the power of unified transactions management. Our software supports all PayComplete hardware and can integrate third-party machines.

Creating a new revenue stream in the front-end with coin kiosks

Nationwide coin shortages have plagued retailers for over 18 months and while Coinstar brings coins into your stores, those same coins are shipped out via CIT and aren't available to use. Keep coins in-store or even use consumer coin to fill tills using our hybrid coin recycling solutions.

Coin Deposit

Coin Recycling

We unify the management of transactions, users, devices, and data across an enterprise, helping businesses become more innovative, agile, and efficient.
